

Product Discontinuance Notice

Part Number Discontinued:	DTA-2145: ASI/SD-SDI input+output with relay bypass for PCIe
Date of Issue:	January 28 th , 2020
Effective Date:	July 31 st , 2020

DISCONTINUANCE DETAILS:

- Manufacturing of the DTA-2145 is becoming increasingly difficult because various components used on the DTA-2145 have reached end-of-life.
- DekTec will discontinue the manufacturing and sale of the DTA-2145 per July 31st, 2020.

REPLACEMENT / ALTERNATE PART:

DTA-2175: HD-SDI/ASI input+output with relay bypass for PCIe

- The DekTec DTA-2175 supports all one-input one-output functionality of the DTA-2145, including the automatic input-to-output connection upon failure. Additionally, it supports HD-SDI input/output.
- The DTA-2175 is significantly shorter in size. Connectivity is the same as for the DTA-2145: 2x 75-Ω BNC.
- The DTA-2175 and DTA-2145 are compatible at API level. However, changing from DTA-2145 to DTA-2175 requires recompilation of your software as well as a different DekTec driver: 'DtPcie'.
- Not supported on the DTA-2175: the option to use both ports as output. In this case the most suitable replacement product is the DTA-2172: dual 3G-SDI/ASI for PCIe

LAST TIME BUY:

- Orders will be accepted until July 31st, 2020.
- Upon acceptance by DekTec, such orders will be firm and final and not subject to any reschedule, cancellation, or termination by the buyer unless accepted in writing by DekTec.
